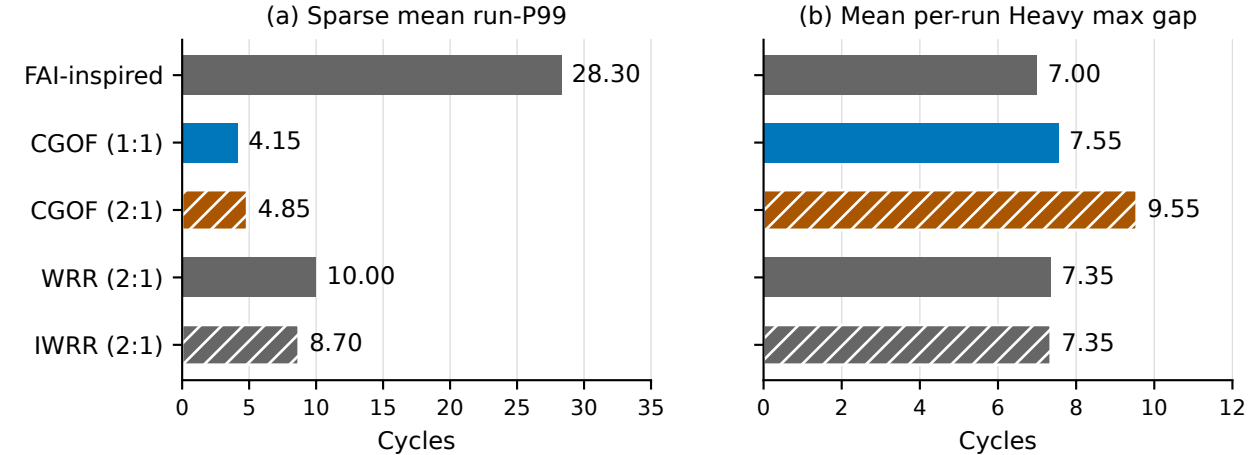
Sparse waiting and Heavy service gaps under overload

MODEL_ONLY · N4/D16 · 20 seeds (6201–6220) · Heavy work = 20,000

W = 5M configured; no classification boundary. Class-aware policies remain initially all High.



CGOF (2:1) − FAI-inspired: paired mean differences, 95% bootstrap CIs (cycles)

Sparse P99: -23.45 [-23.80, -23.15] Heavy max gap: +2.55 [+2.10, +3.00]

Sparse generation-to-fire includes completed drain requests; Heavy gaps use active service.
